

Kenlife Resort Network - Concept Note

A practical hospitality-connected business and professional community.

Edition	R8.9.57 - 27 August 2026
Audience	Prospective members, institutions, partners and stakeholders
Current source	www.kenlife.co.ke/resort-network and the connected Kenlife Network account

One identity. Connected journeys. Controlled documents.

The Resort Network uses the same verified Kenlife identity and connected journey model as the website and KeDOS. Registration moves through Identity -> Profile & Privacy -> Review -> Submit Network Profile. Members then use the Network account for forums, opportunities, introductions, sponsorship and controlled documents.

Purpose

Create useful relationships around Kenlife hospitality, business forums, professional exchange, practical clinics and opportunities - without turning member information into a public directory by default.

Membership journey

- Join through the guided Network profile wizard.
- First Name and Last Name/Surname are mandatory; Middle/Family Name is optional.
- County/region is flexible and can describe multiple operating areas.
- Profile visibility and contact sharing remain consent-controlled.
- Current staff, customer, supplier and Network relationships can converge on the same verified identity where appropriate.

How participation works

- Forums and events carry capacity, registration and QR/pass controls through the connected Events engine.
- Sponsors/exhibitors receive controlled proposals, activation requirements and evidence.
- Introductions use consent-aware sharing rather than exposing contact details automatically.
- Public/current information is published from controlled KeDOS content rather than unmanaged copies.

Need the current version?

Use the Resort Network Documents area on kenlife.co.ke. Downloaded copies can become outdated when a controlled edition is revised.
